Professional Objective

Experienced PHP and Laravel Developer with over 4 years of expertise. Specialized in crafting robust, efficient, and secure web applications. Dedicated to delivering clean, user-centered solutions and committed to enhancing project success through a combination of technical proficiency and a strong focus on exceptional user experiences.

Special Qualification

Experienced Back-End Developer with strong attention to detail and problem-solving abilities. Designing APIs, online applications, and databases with confidence. Expert in coding, software development, application upgrades, maintenance, and code quality for maximum performance.

Education

- **Bangladesh University of Business and Technology**
  Computer Science & Engineering (2017-2021)

- **Urea Sarkar Khana School and College**
  - HSC: Science (2013 - 2015)
  - SSC: Science (2011 - 2013)

Work Experience

Beximco/ Software Engineer (February 2024 – Running)

Key responsibilities:

- Initiate projects from scratch, building a robust development framework.
- Gathered requirements from clients to design scalable database structures.
- Apply best practices to optimize performance and maintainability.

Projects: STL Bond, CRM (Client, Ticketing, Dynamic Sidebar, Planned Work Request, and more modules)

Technologies and Languages: PHP, Laravel, MySQL, JavaScript

[Jatri Service Limited](#)/ Software Engineer (January 2023 – December 2023)

Key responsibilities:

- Analyze industry trends and requirements, break down their requirement, prepare estimations, and exceed expectations by delivering ahead of schedule.
- Efficiently configured Docker and created development-specific Docker files.
- Optimizing queries for enhanced performance.
- Worked with a ticketing module that served 10 million people.
- Implemented with Service Oriented Architecture.
- Managing projects with quality delivery.

Projects: User engagement, Applicant Tracking System

Technologies and Languages: PHP, Laravel, Docker, Nginx, Redis, MySQL, JavaScript, Vue JS, Firebase

[The CellTech](#)/ Software Engineer (July 2022 – March 2023)

Key responsibilities:

- Communicate with potential clients to understand their needs, break down requirements, prepare estimations, and propose.
- Database design and application architecture.
- Develop restful APIs for mobile apps.
- Solving bug issues and some customizations.
- Adding features to existing projects and modifications.
- Seamlessly multitasking across projects while consistently delivering top-notch quality.

Projects: Multi-tenant e-commerce, Inventory management system, Online exam platform

Technologies and Languages: PHP, Laravel, Docker, MySQL, JavaScript

[JoulesLabs](#)/Software Engineer (August 2021 - June 2022)

Key responsibilities:

- Analyzed product requirements for project clarity and developed software from scratch.
- Validated databases with comprehensive test cases.
- Developed RESTful APIs for web and mobile apps.
- Proficient in Service-Oriented Architecture for scalability.

Projects: Communication with I/O device, Time management system

Technologies and Languages: PHP, Laravel, Docker, MySQL

Technical Skills

- PHP
- Laravel, Laravel Nova, Filament
- Docker
- NginX
- Redis
- MySQL
- Javascript
- Vue 3
- Google Chrome Extension Development
- C
- C++

Certificate

Training title: Mobile Application Development

Institute: Basis Institute of Technology & Management (**BITM**)

Duration: 3 Months

Project Experiences

- Cloud Copy: Seamlessly transfer text, images, and more between devices. Enjoy cross-platform content sharing for ultimate convenience. Where my responsibility was
    - Integrated WebSocket for broadcasting events.
    - Designed and developed an intuitive admin panel using Laravel Nova
    - Added a user-friendly feedback collection feature

    Technologies: PHP, Laravel, Laravel Nova, MySQL

- Blogapi Docker: Dockerized Laravel BlogAPI with Sanctum and Social Login.
    - Dockerized the foundational system of the BlogAPI Web for efficient deployment and scalability.
    - Leveraged Laravel with Sanctum for secure CRUD (Create, Read, Update, Delete) functionality within the API.
    - Integrated social credential-based login, enhancing user authentication options for a more versatile user experience.

    Technologies: Docker, Nginx, PHP, Laravel, MySQL

- Women & E-commerce: This is a women's e-commerce site where I worked with
    - Implemented a multi-tenant system to serve multiple online stores on a single platform.
    - Created an admin panel, where the admin can change site settings like
        - Colors for nav bar, header, footer,
        - CRUD new product
        - Edit page info like about us, contact us, terms and conditions, etc.
        - Add/update banner

- User site (where the user can place an order for any product)

Technologies: PHP, Laravel, MySQL

- Tab Lock Forever (Live on Chrome Web Store): A Chrome extension that automatically reopens and pins closed tabs when Chrome restarts, ensuring key tabs are restored
  - Allows users to add URLs for persistent tab reopening and pinning upon browser restart.
  - Includes features for efficient tab management and customization, enhancing user workflow.

Technologies: JavaScript, Chrome Extension API, HTML, Tailwind CSS,

- Vue-Weather-App: The Weather App is a web application that provides current weather information based on your selected location. It also suggests 5 nearby places you can visit. The app uses Vue.js for the front end and fetches weather data from WeatherAPI.com and location data from GeoDB Cities API through RapidAPI.

Technologies: Vue JS, Tailwind CSS, Weather API, GeoDB API

Extra-Curricular Activities
In the BUBT Intra University Programming Contest, I've placed second twice in a row.

Personal Details

Father's Name	: Md. Moshiur Rahman
Mother's Name	: Khodeza Khatun
